

Soil Activator “Harvest”

**** Applying for patent**

<Characteristics>

Soil Activator “Harvest” is made from marine fish and seaweed, and then fermented by probiotics. It is rich in vitamins, minerals, and a variety of amino acids. Fertilizing the soil with Soil Activator after dilution with water can effectively maintain the balance of the soil. The hardened soil can become softer and can contribute to the growth of crop roots. Oxygen in the soil will increase, soil aeration and permeability will also become stronger. It is a fertilizer that does no harm to natural environment.

<How to Use>

Dilution Rate: 800~3000 times (Shake well and dilute with water before use)

Area	Quantity of Soil Activator			Quantity of Water	Usage of interval
	1000 times	2000 times	3000 times		
30 m ²	30 cc	15 cc	10 cc	30L	15~30 days/once
100 m ²	100 cc	50 cc	33 cc	100L	15~30 days/once
1000 m ²	1,000 cc	500 cc	333 cc	1000L	15~30 days/once

* Usage interval and dilution rate vary according to the type of crop.

* When used for fruit trees or trees, fertilize 5 liters with the tree as the center and 50cm~1m as the radius.

Investigate the condition of soil in advance, adjust the alkali balance of soil. And better effect will be achieved after fertilization.

Reference Data: Vegetables(1500~3000 times)

Courtyard trees, flowers, fruit trees (800~3000 times)

Ornamental plant, potted flowers (800~3000 times)

⚠ Attention:

It's not a drink. Please don't drink it.

Avoid direct sunlight and please keep it in a low temperature and dark environment.

Please do not mix it with pesticides. Please use up the diluted soil activator within 2 days.

There may be liquid overflow when opening the lid. Please be careful.

Please read the instruction manual carefully before using it.

Please use it up within 1 year.
